

MAGIC BLUE

WORKS LIKE A CHARM

Baler twines

Piippo Oy has developed twines globally for more than four decades. Piippo twines are manufactured using unique Firm Film Technology® that produces soft twine with unparalleled knot strength. A thinner twine can be used to achieve higher knot strength, meaning that a pack of Piippo twine lasts for 20% more bales! Time savings are also significant, as less time is required for changing the rolls and the operating time on the field becomes longer. Piippo twines are also characterised by uniform quality and functionality in all conditions and all balers.

Piippo Big Square Baler Twine

115 – 145 m/kg. High knot strength and actual running metres! High Piippo quality is most evident in big square baler twines. Contractors all over the world appreciate the time savings and the possibility to produce bales of maximum density. Your valuable baler needs a matching twine!

	Pack size kg	Guaranteed m/pack	Knot strength kp	Tensile strength kp
115 Xtreme	18	2070	210	330
122 Magnum	18	2196	190	315
130 Big Square	18	2340	180	295
145 Original	18	2610	160	270

Piippo Conventional Baler Twine

300 – 400 m/kg. Extremely tight knots allow for dense bales to be formed, while exact spooling guarantees trouble-free baling. Twine residues do not stick in the tying machine. The soft structure makes the twine comfortable to handle.

	Pack size kg	Guaranteed m/pack	Knot strength kp	Tensile strength kp
300 Hay	10	3000	80	140
400 Traditional	10	4000	62	105

Piippo Round Baler Twine

600 – 1000 m/kg. This twine contains a material additive that increases its adhesive property. More metres per pack provide more baling time per load.

	Pack size kg	Guaranteed m/pack	Knot strength kp	Tensile strength kp
600 Round Bale	10	6000	40	70
700 Triathlon	10	7000	35	60
850 Long Champ	10	8500	27	49
1000 Marathon	10	10000	23	42

Piippo Sisal Baler Twine

200 – 300 m/kg. Suitable for both round baling and high density baling. Traditional Sisal presents an environmentally friendly alternative for your baling operations.

Green Cap

Piippo Oy's patented Green Cap® system makes the installation of net wrap easy. The net goes smoothly in the right direction the first time. This eliminates unnecessary lifting. The green marking in the net wrap indicates the direction of rotation.

Sealed

Quality also extends to the net wrap package. The weatherproof bag, sealed at both ends, makes storage easy both on the farm and in the store.

SuperCore

Light rain is not a problem for this core that retains its reliability also in difficult conditions. Thanks to SuperCore, cores will no longer stick in the trays. The inside of the core also includes the unique quality assurance identifier of the net.

Double End Warning Stripe

The first stripe catches your attention 50 metres before the end of the roll. For the last 25 metres, the second stripe appears beside the other, easily and precisely indicating the end of the roll.

+3% Free

Piippo Magic Blue net wrap gives you 3% more net without any extra charge.

A new era in baling begins

For over a decade, Piippo Net Wrap has been world-renown for its quality and reliability. Now the development continues when Piippo introduces fully improved Magic Blue net wrap. The improved manufacturing process of Magic Blue guarantees tighter bales, perfect spread and reliability regardless of the baler brand. Magic Blue net wrap is suitable for fresh forage, straw and hay baling. The functionality of the net in all balers on the market has been tested and confirmed in co-operation with leading contractors.

Reliability increases efficiency

"I tested the new Magic Blue net wrap for the first time in autumn 2004. We make over 10,000 bales annually, so the net has to be reliable in all circumstances. Time is money during the season. Some cheaper net wraps can actually turn out to be quite expensive, if their quality is poor and they do not function properly. The first thing that grabbed my attention in Magic Blue was the incredible spread and reliability even in wet circumstances. All in all, it is the best net wrap I have ever used" - Jari Myllymäki, contractor, Finland.

Easy Coverage System 2

Easy Coverage System 2 spreads the net evenly on the bale better than before and eliminates troublesome "shoulders". Symmetric and uniform bales are easier to store. ECS 2 also protects the bale from harmful moisture and increases the quality and preservability of the crop.

Net size

Width	Length
1.23 meters	2 000 and 3 000 meters
1.25 meters	2 000 and 3 000 meters
1.30 meters	2 000 and 3 000 meters
